DETAILED ACTION

Response to Amendment

1. The amendment filed February 14, 2005 with respect to the corrections of the specification and drawings have been entered.

Response to Arguments

2. Applicant's arguments, see pages 4-6, filed February 14, 2005, with respect to the examiners improper inclusion of the present invention's determination of amplitudes of echo in Abdelilah's, prior art of record (US 6,650,657), determination of PAD impairments have been fully considered and are persuasive. The examiner respectfully withdraws the rejection of claims 1 and 23.

Allowable Subject Matter

3. Claims 1 and 23 are allowed. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art of record fails to disclose or fairly suggest a method comprising the steps of detecting the amplitudes of the echo of said portions of said training signal that are received over said network, and determining from said amplitudes which portions of said echo include a robbed bit; and generating a signal indicating the location said robbed bit.

Regarding claim 23, the prior art of record fails to disclose or fairly suggest an apparatus comprising a level adapter for generating signals, $H(n)$, indicative of the amplitudes of the echo of said portions of said training signal that are received over said network; and a robbed bit detector for determining from said amplitudes which portions of said include a robbed bit; and generating a signal indicating the location of said robbed bits in said echo.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

a) Olafsson et al. (US 6317419), Method and Apparatus for Training an Echo Canceller in a PCM Modem Context

b) Okunev et al. (US 6272171), Robbed Bit Signaling Identification in a PCM Modem
